

# Introduction

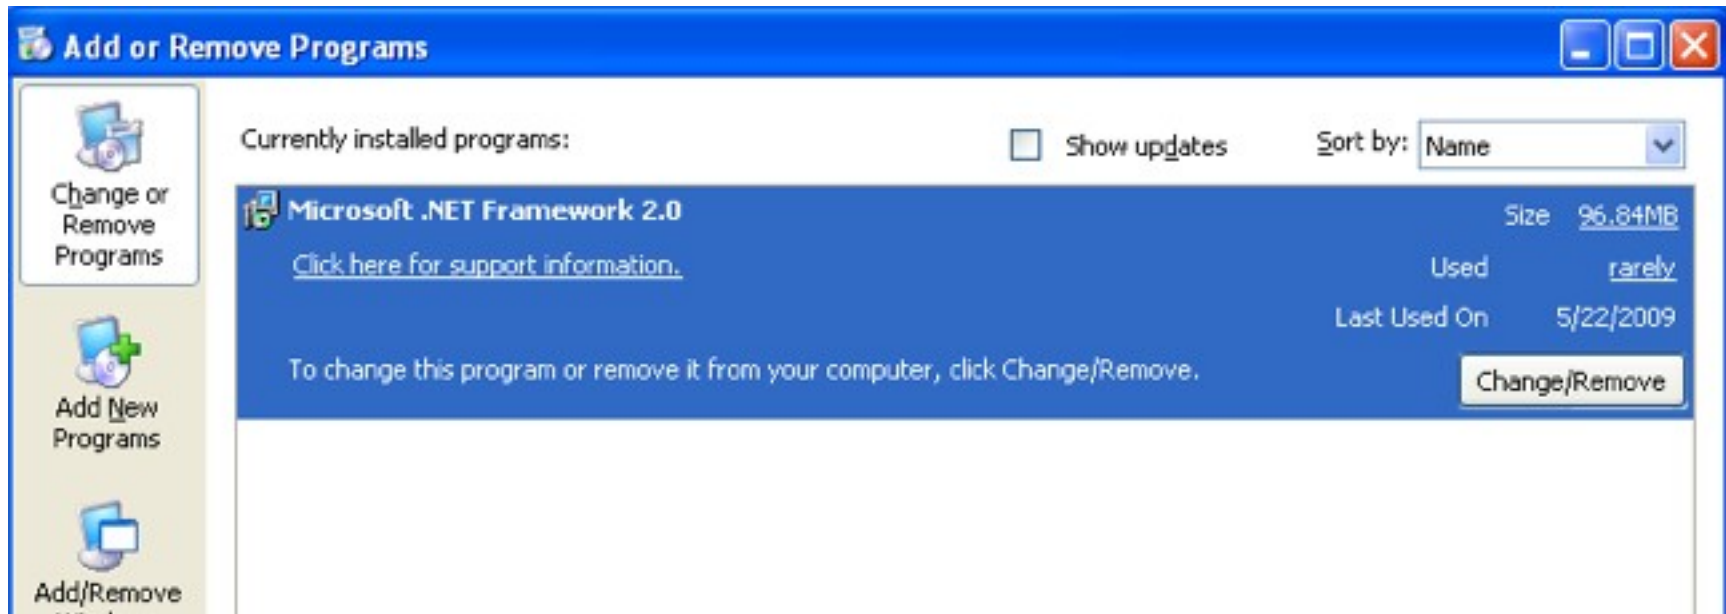

- kasahorow keyboard installer for Windows works for both XP and Vista. This guide will show you how to install the keyboard installer on Windows XP. It also shows how to install your preferred language keyboard and fonts. It assumes that you are installing the kasahorow keyboard installer in a fresh installation of Windows XP.

# Download & Extract

- Get an archive of the Windows XP installer from <http://code.google.com/p/africakeyboards/downloads/list>. The file you are looking for has a '.zip' extension (without the quotes).
- Extract the files in the zipped folder to any location on your computer.

# Check for .NET 2.0

- Before you install, make sure you have Microsoft .NET Framework ver. 2.0 installed. The keyboard installer will not install if you do not have this program installed.
  - You can check if you have that program by looking through your list of installed programs: Go to Start >> Control Panel >> Add or Remove Programs

# Get .NET 2.0

- Get Microsoft .NET Framework 2.0 from Microsoft's website
  - Get the x86 binary if you have a 32-bit Intel processor from here --  
<http://www.microsoft.com/downloads/details.aspx?FamilyID=0856EACB-4362-4B>
  - Get the x64 binary if you have a 64-bit processor from here --  
<http://www.microsoft.com/downloads/details.aspx?familyid=B44A0000-ACF8-4FA>
- If you are unsure what binary of .NET you need, download both binaries and try to install the 32-bit version first.
- Proceed to install the kasahorow keyboard installer.

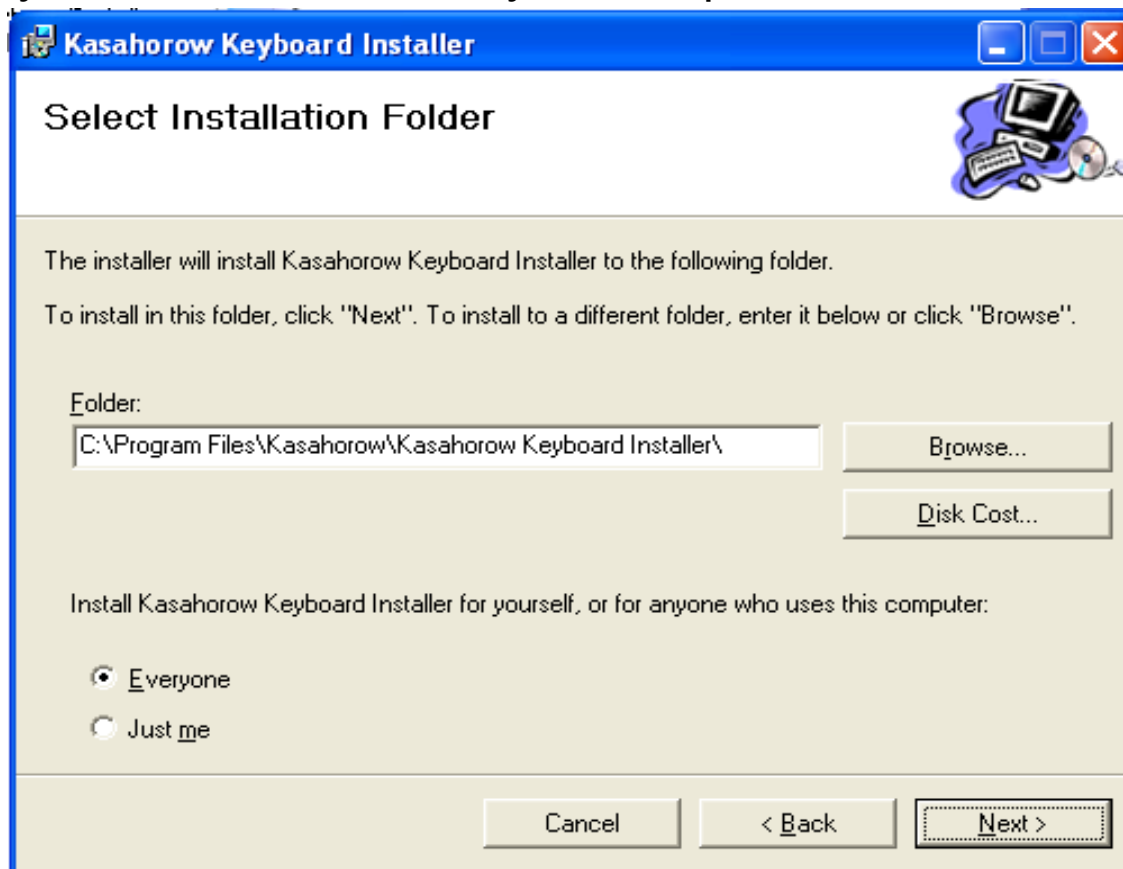

# Install

- Install the keyboard installer by double clicking the setup.exe file.

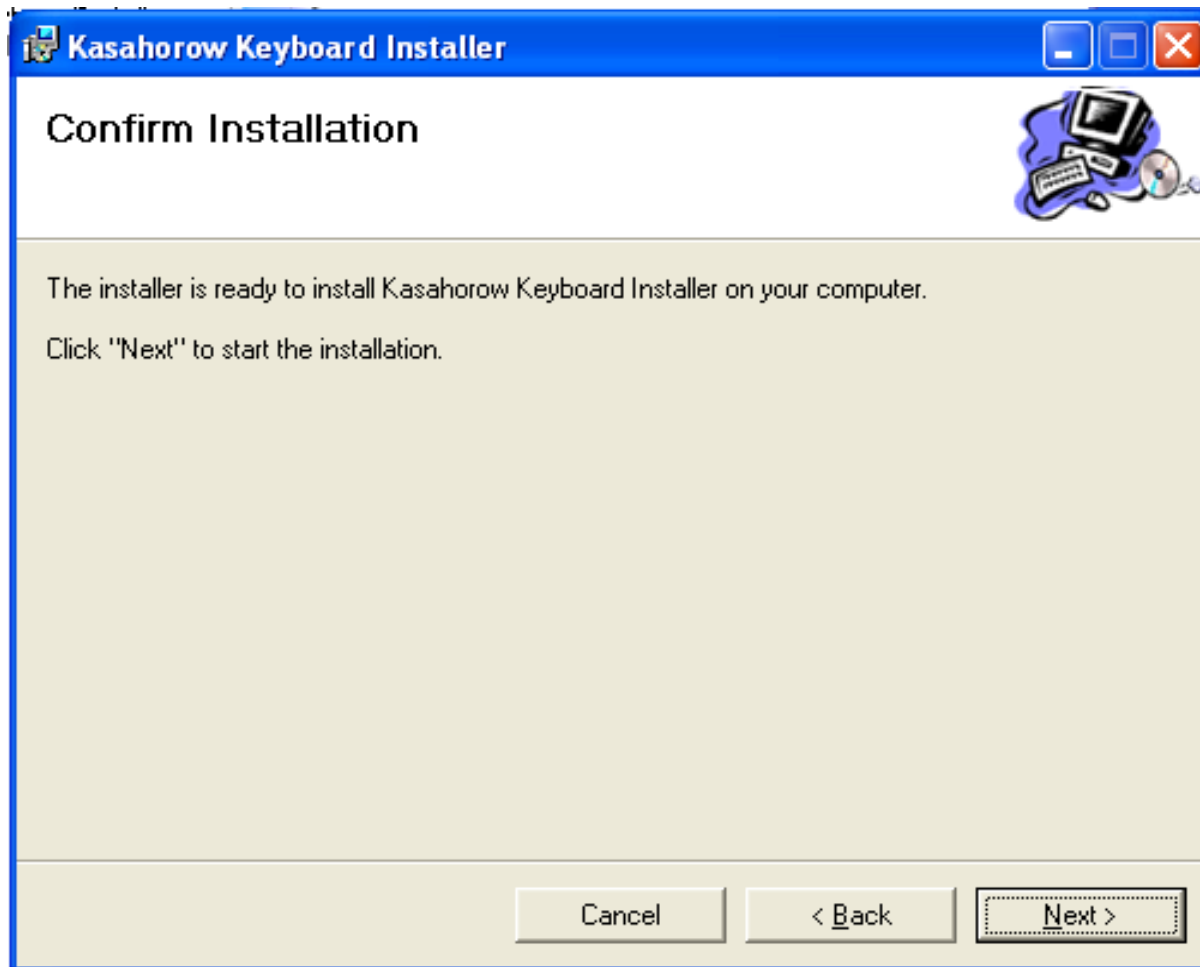

# Install cont'd

- Browse to select an installation folder and click next to continue. You can also specify here which users you wish to install the keyboard for. It is recommended that you install the keyboard for all users on your computer.
